**We acknowledge the Turrbal and Yuggera
peoples as the traditional custodians of the
Brisbane region and pay respect to Elders past,
present and emerging.**

Responding to the News

To my surprise I immediately responded with my brother-in-law will heal me. He is an Aboriginal healer Ngangkari. This is when I realised that I reached out for my spiritual and cultural healing. I had never experienced this before. When your back is against the wall you can call on your ancestors to hear you.

Ngangkari Healing

The specialist from the hospital rang and said I should come in straight away to start the chemo treatment. I told him I was waiting for my brother-in-law, Ngangkari to come and see me and heal me before I start the chemo treatment.

I closed my eyes and soaked up all the healing. His wife was there to assist him.

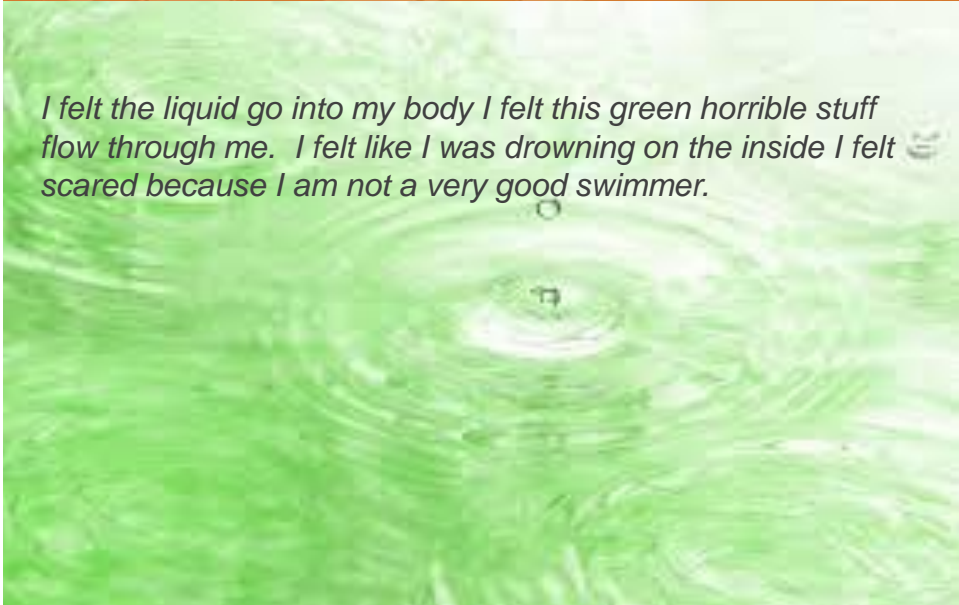

After a while he said, "you are right now sis."

The next day I rang the hospital and the doctor said we will start the chemo.

Medical Treatment

I felt the liquid go into my body I felt this green horrible stuff flow through me. I felt like I was drowning on the inside I felt scared because I am not a very good swimmer.

Drawing Strength from my culture

I felt was a blessing for me to connect with my cultural background. These visits strengthened me more than I realised at the time

By October of that year I had finished my job and also my chemo. I could rest for now.

Getting on with life, then.....

I wanted to throw myself in front of a truck.

I resigned from my job.

My body was not coping.

Cancer Data and Aboriginal
Disparities (CanDAD): ACoRG

CanDAD's Aim

CanDAD aims to develop an Advanced Cancer Data System for ongoing, systemic and culturally appropriate tracking of Aboriginal peoples' experiences of cancer and cancer services for continuous quality improvement

Epidemiological data

Experiences of Cancer Care

Aboriginal Cancer Experiences

Semi-structured interviews with:

27 patients / survivors

[aged 19-75, 52% Male. Primary sites: Lung (5), lymphoma (4), breast (4), leukemia (3), head & neck (2), colorectal (1), multiple (1)]

eg. "When you have been unwell with cancer, have people looked after you properly?"

14 Carers / family members

[aged 20 – 67, 71% female (10)]

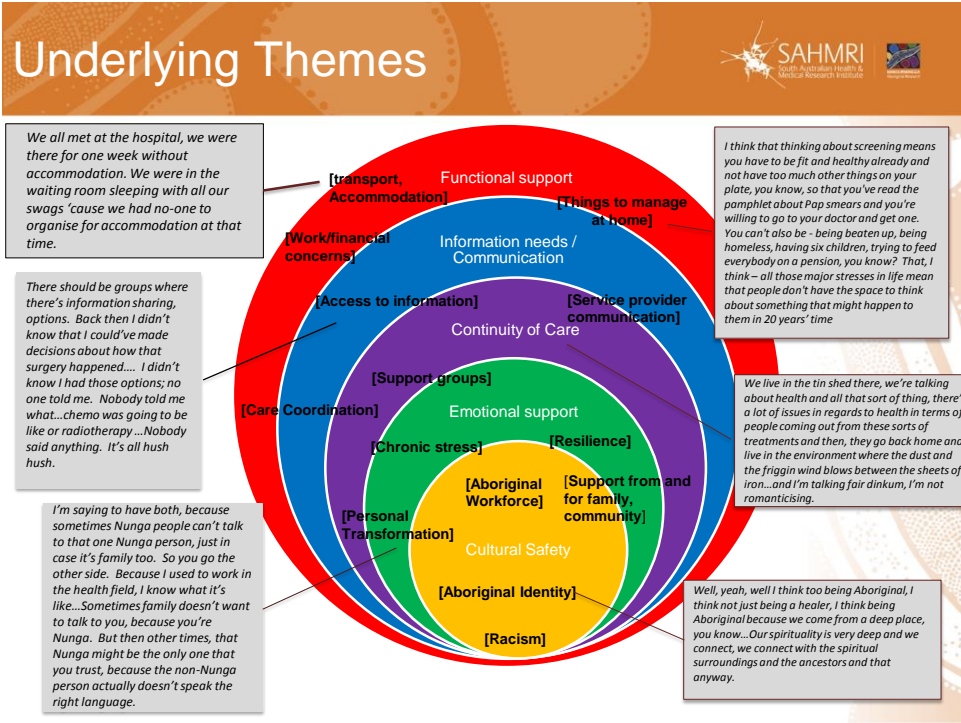

eg. "How could things be better for you and your family to get the care you need when they are unwell?"

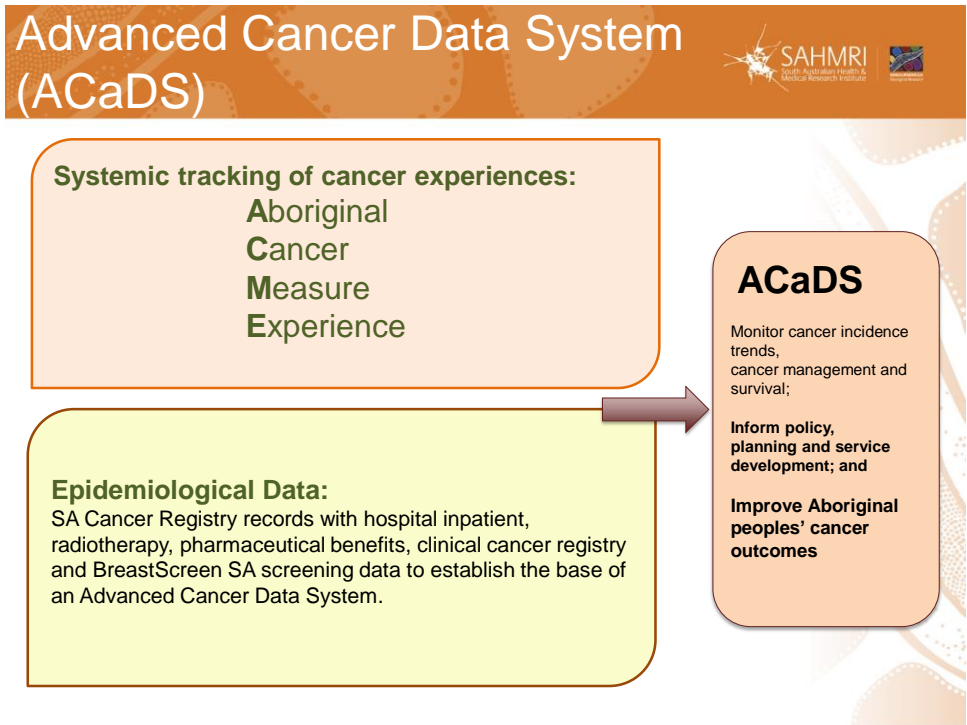

22 Service Providers

[80% women (16); 13 Aboriginal; 7 non-Aboriginal]

eg. "Do you feel you are able to practice 'caring well' for your Aboriginal patients with cancer in this health service? Why/why not?"

Cancer pathway mapping tool									
	Cancer awareness and risk factors	Symptom recognition and screening	Diagnosis and referral	Getting to specialist/ Pre-treatment	Treatment as an inpatient	Treatment as an outpatient	Discharge and transfer	Follow-up, ongoing support or palliation	Traditional or complementary healing/therapies
Health service priorities									
Patient experience									
Patient priorities, concerns and commitments									
Family/carer experience									
Family/carer priorities, concerns and commitments									
Barriers to health service provision									
Enablers to health service provision									
Service gaps									
Responses to service gaps									
Health service implications
