

INHALED CORTICOSTEROID STUDY

DOES YOUR CHILD HAVE A COUGH?

- Cough is one of the most common reasons for children to visit health services
- Cough is treated with a mixture of treatments, some help and some have little effect
- An inhaled corticosteroid is often used to help reduce swelling in the airway
- We are trying to find out if this asthma inhaler will help children with a cough.

We would like to invite your child to be part of this research study if they are:

- Aged ≥ 18 months and ≤ 16 years
- Coughing for less than 2 weeks **OR**
- Coughing for 4 weeks or longer.

If you are interested in being involved, please contact us on the below details.

Human Research Ethics approval: HOMER 2013-2097
