Making a Plan

Everyone makes plans. Plans are about deciding *now* what you want to do in the future. Plans are about making sure that someone understands your story and how you would want your story to go.

You can change your plan and story at any time.
Making a Plan

Your kidney story can include what type of treatment you may do.
Everyone has different sicknesses. The doctor may say that some treatments are not good for you.

You may decide that some treatments are not good for you.

It is important that you understand your kidney disease and treatment choices so that you can decide on your kidney story and make a plan.
Making a Plan

Making the right life choices will help you to live longer and feel better.
When you are ready to make a plan for your kidney story, talk to the health clinic or kidney team. They will help you to write down your story so that everyone will know what you have decided.

This is called an Advanced Care Plan (ACP) and it tells your doctors and family what you have decided about how you want to manage and treat your kidney disease.
Some people do not want to have dialysis.

If you do not want dialysis you can talk with your family and kidney doctor about how you want your story to go for the rest of your life.

You can put this story in your plan.
If you start dialysis you can change your mind later and stop the treatment.

Talk about it with your kidney doctor, nurse and family.

This can be put in your plan too.
Making a Plan

You may have other sicknesses as well as kidney disease.

- Short wind
- Heart problems
- Diabetes
- Blood pressure

These may get worse over time and you may become too sick to speak for yourself.

It is important that your story is written down so that your doctors and family know what to do.
Making a Plan

You can decide how you want to finish up.
Palliative Care is for people that have a sickness that cannot be cured or fixed and they will pass away.

Palliative care means getting help from health care workers and family to help you pass away the way you want, in a safe and comfortable way.
Every body passes away in different ways.

It may take a long time - months or year.

It may take a short time - days or weeks.
Palliative Care

These are some of the things you will feel:

- Itchy skin
- Short wind
- Confusion
- Don’t feel hungry
- Tired and weak
- Sadness or depression
- Puffy - bloated legs and tummy
- Blurry vision
Taking medicines can help you feel more comfortable.

Using a patch will take some of the pain away.
There are different places where you can get care when you finish up.

You can finish up at home, at your community.
You can finish up at the hospital.

You can finish up at a hospice.
Even if you are very sick, at the hospital we can still help you to go home and finish up with your family.
Most of the time people will become very sleepy and will pass away in their sleep very quietly.
The Chronic Kidney Disease Book

Project Management: Michael Roseth  
Art work: michael.roseth@nt.gov.au

Content Development: NT Renal Services

Consultants: Renal patients, NT Palliative Care, PEPA Program, NT Preventable Chronic Disease Program, NT Aboriginal Interpreter Services, NT Aboriginal Services Support Unit, NT Aboriginal Workforce Development, Western Desert Nganampa Walytja Palyantjaku Tjutaka, Congress, Danila Dilba Health Service, Katherine West Health Board

Border art work: From NT Palliative Care Model  
Design by Bev Derschow  
Painting by Barrapuy Wanambi, Dipililnga Marika, Wayalwanga Marika, Samuel M Assan, Nina Puruntatameri, Karina Napagardi Penhall

NT Renal Services would like to thank all the renal patients and others who donated their time in posing for the photos that were used to make the illustrations in these books.
